

## § 148.101

*Refining District* means a refining district as defined by the Bureau of Mines, Department of the Interior, for reporting refining operations.

*SPM* means single point mooring buoy.

*Year-end proved reserves of crude oil* means the estimated quantities of all liquids statistically defined as crude oil, which geological and engineering data demonstrate with reasonable certainty as of December 31 of the year concerned to be recoverable in future years from known reservoirs under existing economic and operating conditions. Reservoirs are considered proved if economic producibility is supported by either actual production or conclusive formation tests. The area of an oil reservoir considered proved includes:

(1) That portion delineated by drilling and defined by gas-oil or oil-water contacts, if any; and

(2) The immediately adjoining portions not yet drilled, but which can be reasonably judged as economically productive on the basis of available geological and engineering data.

In the absence of information on fluid contacts, the lowest known structural occurrence of hydrocarbons controls the lower proved limit of reservoir. Reserves of crude oil which can be produced economically through application of improved recovery techniques (such as fluid injection) are included in the "proved" classification when successful testing by a pilot project, or the operation of an installed program in the reservoir, provides support for the engineering analysis on which the project or program was based.
